Project RED

The Clark County School District has been selected as one of 20 Project RED Signature Districts in the nation that will receive ongoing guidance in education technology implementation, focusing specifically on one-to-one computing deployments. Project RED, a research organization committed to transforming education through successful technology integration, is bringing its research to action through its Signature District program.

About Project RED

In 2010, Project RED conducted a survey of technology programs in 1,000 U.S. schools, which is the first and only national research focusing on academic results and the financial implication of education technology. The research shows that, if effectively implemented, technology programs can lead to improved student achievement and significant return on investment. Based on those findings, Project RED created a replicable design for school districts to make the best possible use of technology in a learning environment.

Project RED offers a variety of ways districts can benefit from its research, including in-person institutes November 15-16, 2012 in Auburn, Ala. and December 3-4, 2012 in River Edge, N.J., a series of 10 implementation webinars, online tools and resources, and Project RED's Signature District program. Thanks to sponsor support, the majority of Project RED's resources are offered at low- or no-cost to educators. Learn more at www.ProjectRED.org.

Intel Corporation is the founding sponsor of Project RED. Lead sponsors for 2012-2013 are Intel Corporation and Hewlett-Packard. Additional sponsors include SMART Technologies and the Pearson Foundation.
