

SAFETY

The superintendent of schools directs that all reasonable means be taken to prevent accidents to children, employees, and the general public while they are on school property. Efforts will be made to provide and maintain safe working conditions and equipment; safety education programs will be provided for students. Provision will be made to gather data which will be useful in creating a safer environment and in providing a basis for corrective action.

Employees are responsible for using appropriate and safe procedures in carrying out their responsibilities. Special instruction will be given students in the use of equipment and supplies.
